

GETTING BACK TO THOSE MOMENTS WE MISS

starts with getting informed.

COVID-19 has changed how we live and how we feel. But now, vaccines are becoming available. And they are the first step that let us get back to what we miss most.

5 things you and your family should know about **COVID-19 Vaccines**

- 1** You will not get COVID-19 from COVID-19 vaccines.
- 2** **The vaccines are safe.**
The mRNA vaccines have been in development for years and have been proven to be safe and effective. Researchers began developing vaccines for COVID-19 in January 2020, based on decades of understanding immune response and how vaccines work. Thousands of volunteers participated in clinical trials that started that spring, making sure we can trust the vaccines to be safe and effective.
- 3** **The vaccines are free.**
The federal government is providing the vaccine free of charge to all people living in the United States. Insurance providers will cover the cost of the vaccine, and the U.S. government has set up a system to cover costs for those who do not have insurance. No one can be denied a vaccine if they are unable to pay a vaccine administration fee.
- 4** **Researchers made sure that the trials included adults of diverse backgrounds, races, ethnicities, and geographic areas.**
- 5** **The COVID-19 vaccines are available for the undocumented community.**
Health providers should not discriminate against undocumented individuals from getting the COVID-19 vaccines. Some personal information might be requested, and the personal information requested will vary by site. Although fear is a reality for the undocumented community when giving out personal information, it is important to seek information from community allies. Speak with a local trusted source in your community on how you can get a COVID-19 vaccine in your state and what personal information will be needed from you.

Continue wearing masks, staying 6 feet apart from people we don't live with, avoiding crowds, and washing our hands.
